Relay Conflicts

Relay Conflicts takes conflict searching to the next level.

Most conflicts packages search their own database and nothing more. So the firm either needs to manually search other databases or try to keep the data in sync at a central location. The Relay Conflicts system searches your Time & Billing, Document Management, Marketing or any SQL based system you designate.

We have name import functionality for large lists of search terms as well as web based interactive reports that can distribute hits and keep track of the responses. We then guide the information through your conflict approval processes.

CF Only	Name	Search Criteria	Type	CF	C	M	P	A	R	T	Hits
<input type="checkbox"/>	Consolidated	Consolidated	Client	0	2	2	3	0	11	0	18
<input type="checkbox"/>	McManus Dan*	McManus Dan*	Client	0	0	0	0	0	10	0	10
<input type="checkbox"/>	Barker	Barker	Client	0	0	1	0	0	11	0	12
<input type="checkbox"/>	Acme Research	Acme*	Company	0	2	1	0	0	23	0	26
<input type="checkbox"/>	Acme	Acme	Client	0	2	1	0	0	23	0	26

Advantages

Relay Conflicts gives you these advantages:

- Relay searches multiple data sources (CMS, Elite, Interwoven, etc.).
- Relay can import a large number of search terms from a .csv file to make your life easier.
- The conflicts desk receives hit summaries to help facilitate cleaning up the hit list for the lawyer to review.
- The conflicts report can be reviewed by the conflicts staff before submitting it via email for further review.
- Relay Reports are interactive and have decision points built-in to the report:
 - Approve
 - Reject
 - Return
 - Resubmit
- The conflicts search and workflow histories are stored for later retrieval.
- The conflicts search is performed in the background, so the conflicts staff can move on to other requests while a large search is happening.
- Relay can download the National Terrorist Database to a table and keep the information up-to-date for searching.
- Dun & Bradstreet integration and document searching.

Interactive Reports

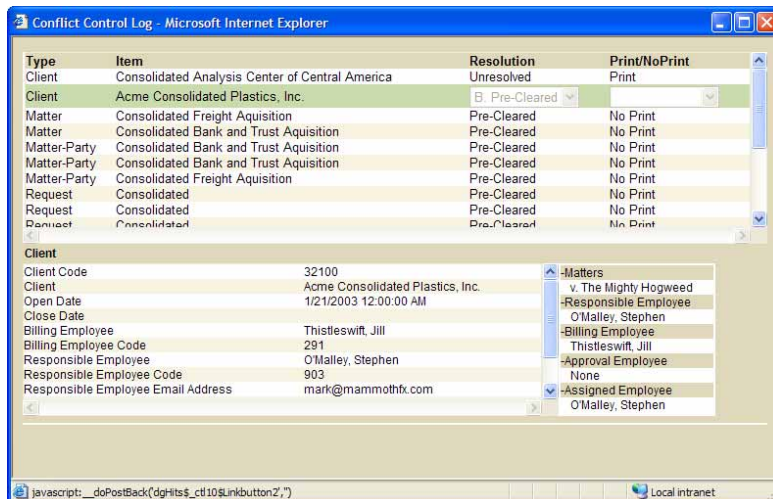

Relay Reports are interactive and have decision points built-in to the report.

When the conflicts team has completed their work, Relay Conflicts provides printed and online conflicts reports. Relay emails the online report to the professionals, notifying them of pending work. Simply click on a link in the email to go to the work needing attention.

Relay Conflict's online reports are interactive and have decision points built in. The user can approve or reject the request as well as forward the report to other individuals, or even resubmit the request for additional searching. The conflicts report provides comment fields for the user to enter additional search detail. When the request is forwarded to another reviewer, these comments describe and contextualize the search subject.

Conflicts Search

Relay Reports are interactive and have decision points built-in to the report.

The Relay Conflicts module is flexible enough to search multiple SQL data sources. This means Relay Conflicts can look at the accounting, time entry, document management and even the request data for possible conflicts. This conflicts search is far more comprehensive and provides the professional with valuable information to make the right decision.

Once the conflicts staff has initiated a comprehensive search, the Relay Conflicts system works behind the scenes, searching multiple data sources and compiling report information. This allows conflicts staff to move on to other priorities.
